

SHOWCASE

Court of Final Appeal – Hong Kong, China

What was described as one of the significant colonial-era buildings in Hong Kong, the 103-year-old Court of Final Appeal now features a modern and brilliant historical block in Central. The exterior of the neo-classical style architecture was declared as a monument since 1984 and it was also used to house the former Supreme Court and Legislative Council. After the completion of renovation, the landmark block starts to operate in September 2015 and it is home to the final appellate court as well as a crucial part in Hong Kong's common law development. Traxon develops a dynamic lighting solution that celebrates a century of historical architectural elements of the building. 261 Traxon Wall Washer Shield AC XB in warm white with 30 degree of optics are mounted in the windows and roof top which is a perfect solution to highlight the architecture of the façades. Schneider BMS system is used as a main lighting control that generates DMX signals to control the color temperatures with different time periods on each day. The stunning and glamorous façade turns the prestigious block of Court of Final Appeal into a modern and vibrant architecture that dazzles the passerby and visitors.
